

Technical Specifications

BGI's wedge roadblocks are the anti-ramming solution of choice for the highest security installations where full width lane protection is required. With their quick deployment and ability to bring a vehicle to a complete halt, the R-2000 roadblocks are engineered to meet the most demanding security standards.

The R-2000 roadblock is suitable for the protection of sensitive government and military locations and of entrance ways to key infrastructure compounds. With a strong 1.20 m foundation and an efficient hydraulic mechanism, the R-2000 roadblock is simple to install and requires minimal maintenance. The roadblock can be activated using a range of access control solutions and can be fully integrated into perimeter security systems.

- Highest protection level
- Fast operation
- Reliable
- Low maintenance

SPECIFICATIONS

Barrier Type	-	Wedge Roadblock R-2000
Mechanism	-	Hydraulic
Power Supply	-	3 HP Motor 240V AC
Foundation	-	Length: 3000mm-4000mm Depth: 1200mm Width: 2000mm
Deployment Speed	-	4 seconds
